Art Unit: 2609

DETAILED ACTION

Response to Amendment

1. Applicant's amendment filed on 3/26/2007 has been entered. Claims 1, 3-4, 6-11, and 13-14 have been amended. Claims 2, 5, and 12 have been canceled. Claims 1, 3-4, 6-11, and 13-14 are still pending in this application, with claims 1 and 11 being independent.

Rejections - 35 USC § 112

- The following is a quotation of the second paragraph of 35 U.S.C. 112:
 The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.
- 3. Claim 3 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Regarding claim 3, the phrase "the communication controller includes the selection device and the recognition information providing device" renders the claim indefinite; the two recited elements, the selection device and the recognition information providing device, were claimed to be included in the portable device on claim 1 not the communication controller. Appropriate correction is required.

Rejections - 35 USC § 102

4. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the

Art Unit: 2609

applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

5. Claims 1, 3-4, 6-7, 11, and 13-14 are rejected under 35 U.S.C. 102(e) as being anticipated by Ciotta (US 6,856,804).

Regarding claim 1, as shown in Fig. 3, Ciotta discloses a communication system comprising:

a portable device via (mobile station 10) having a communication function (see Col. 8, lines 24-29);

a communication controller via (base station 20, mobile switching center 30, home location register 40, and database 50 forming a communication controller) that automatically performs mutual communication with the portable device (mobile station 10) and controls a predetermined driver via (remote computer system 60) in accordance with whether mutual communication with the portable device (mobile station 10) is established (see Col. 8, lines 24-59; Col. 9, lines 1-15 and 26-55; Col. 10, lines 14-25 and 60-64; and Col. 11, lines 17-21);

a selection device via (mobile station 10) which selects a disablement mode via (powering off) which disables automatic communication of the portable device with respect to the communication controller and a communication mode via (powering on) which enables automatic communication of the portable device (mobile station 10); (See Col. 8, lines 11-19 and 24-29; Col. 9, lines 1-15 and 26-35; Col. 10, lines 60-64; and Col. 11, lines 14-21);

Application/Control Number: 10/716,308

Art Unit: 2609

a determination unit via (mobile station 10 and communication controller that determines whether to enable or disable automatic communication with mobile station 10 by recognizing which one of the disablement mode i.e., when mobile station 10 is turned off and communication mode i.e., when mobile station 10 is turned on) (see Col. 8, lines 11-19 and 24-55; Col. 9, lines 1-15 and 26-55; Col. 10, lines 27-35 and 60-64; and Col. 11, lines 4-9 and 12-21); and

a recognition information providing device via (mobile station 10) which provides the determination unit with recognition information used to recognize which one of the disablement mode and communication mode the portable device is in (when a selection such as power off is recognized by the mobile station, the mobile station sends a signal indicating that the particular mobile station is off; See Col. 8, lines 11-13 and 24-29; and Col. 9, lines 26-30),

in accordance with the selection by the selection device, wherein the portable device includes the selection device and the recognition information providing device,

wherein the portable device includes a receiving circuit (inherent on mobile station 10, mobile station 10 receives data from other devices) which receives a signal from the communication controller, the portable device inactivating the receiving circuit when the portable device is in the disablement mode (powered off), and

wherein the recognition information includes a disablement mode signal (signal indicating that the mobile station is off, see Col. 8, lines 11-13) which indicates the disablement mode.

Art Unit: 2609

Regarding claim 3, Ciotta discloses the communication controller includes the selection device and the recognition information providing device via (base station 20 communicating mobile station 10). (See Col. 8,lines 11-19 and 24-29; Col. 9, lines 1-15 and 26-35; Col. 10, lines 60-64; and Col. 11, lines 14-21).

Regarding claim 4, Ciotta discloses a wireless communication system, as shown in Fig. 4, comprising at least one other portable device via (a plurality of mobile stations 10), and the determination unit of Ciotta's communication controller disables automatic communication with respect to each portable device (mobile station 10) that is in the disablement mode (powered off). (By routing calls and messages to the disabled mobile stations 10 to voice mail. See Col. 11, lines 4-21).

Regarding claim 6, Ciotta discloses the portable device includes a transmitting circuit (inherent on mobile station 10), which transmits a signal to the communication controller, the portable device inactivating the transmitting circuit when the portable device is in the disablement mode via (mobile station 10 powered off). (See Col. 8, lines 11-19; Col. 9, lines 1-15 and 21-24; Col. 10, lines 60-64; and Col. 11, lines 12-21).

Regarding claim 7, Ciotta discloses the portable device includes a notification device (mobile station 10), which generates a notice that the portable device is in the disablement mode (when powered off, mobile station 10 send a signal indicating that the particular mobile station is off) and which generates a notice that the portable device has shifted from the disablement mode to the communication mode (when the mobile station 10 is turned on a signal is sent to base station 20). (See Col. 8, lines 11-13, and lines 24-25).

Art Unit: 2609

Regarding claim 11, Ciotta discloses a method for reducing power consumption in a communication system the communication system including a portable device via (mobile station 10) and communication controller via (base station 20, mobile switching center 30, home location register 40, and database 50 forming a communication controller) that performs automatic communication with the portable device, wherein the portable device includes a receiving circuit (inherent on mobile station 10, mobile station 10 receives data from other devices) which receives a signal from the communication controller, the method comprising:

selecting a disablement mode on a portable device via (turning mobile station 10 off) which disables automatic communication of the portable device relative to a communication controller (base station 20) and a communication mode via (turning mobile station 10 on) which enables automatic communication of the portable device; (see Col. 8, lines 11-10 and 24-35; Col. 9, lines 26-35; Col. 10, lines 60-64; and Col. 11, lines 4-21)

transmitting recognition information from the portable device to the communication controller in accordance with the selection by the portable device via (when powered on or off is selected on the mobile station 10, status of mobile station 10 is recognized and transmitted to base station 20), wherein the recognition information is used to recognize which one of the disablement mode (mobile station 10 off) and the communication mode (mobile station 10 on) the portable device is in, and wherein the recognition information includes one of a communication mode signal via (when a mobile station 10 is turned on, a signal is sent from the mobile station 10 to a base

Application/Control Number: 10/716,308

Art Unit: 2609

station 20), which indicates the communication mode, (See Col. 8, lines 11-19 and 24-35; Col. 9, lines 1-15 and 26-35; Col. 10, lines 60-64; and Col. 11, lines 12-21)

determining with the communication controller which one of the disablement mode and the communication mode the portable device is in from the recognition information (on or off signal from mobile station 10 is determined by base station 20) (see Col. 11, lines 12-21);

disabling automatic communication of the communication controller relative to the portable device when it is determined that the portable device is in the disablement mode (routing incoming calls and messages intended for mobile station 10 to voice mail when the communication controller determines that mobile station 10 is off) (See Col. 11, lines 12-21),

and inactivating the receiving circuit when the portable device is in the disablement mode via (the receiving circuit is inactive when mobile station 10 is off). (See Col. 8,lines 11-19; Col. 9, lines 1-15 and 26-27; Col. 10, lines 60-64; and Col. 11, lines 12-21).

Regarding claim 13, Ciotta discloses the portable device (mobile station 10) includes a transmitting circuit (inherent on mobile station 10), which transmits a signal to the communication controller via (mobile station 10 on or off signal), the method further comprising: inactivating the transmitting circuit when the portable device is in the disablement mode via (when mobile station 10 is off, transmitting circuit is inactive). (See Col. 8,lines 11-19; Col. 9, lines 1-15 and 21-24; Col. 10, lines 60-64; and Col. 11, lines 12-21).

Art Unit: 2609

Regarding claim 14, Ciotta discloses the method further comprising: generating a notice that the portable device is in the disablement mode via (when powered off, mobile station 10 sends a signal indicating that the mobile station is off); and generating a notice that the portable device has shifted from the disablement mode to the communication mode via (when mobile station 10 is on, a signal is sent from the mobile station 10 to a base station 20). (See Col. 8, lines 11-13, and lines 24-25).

Claim Rejections - 35 USC § 103

- 6. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 7. Claims 8-10 are rejected under 35 U.S.C. 103(a) as being unpatentable over Ciotta as applied to claim 1 above, and further in view of Hara (US 2002/0025823).

Regarding claims 8-10, Ciotta discloses the structural elements of the claimed invention but fails to disclose the predetermined driver is a door lock driver, which locks and unlocks a door of a vehicle or house.

Hara teaches a smart entry system, this system includes a portable device and a stationary device (stationary device mounted on a vehicle), when mutual communication between the portable device and the stationary device is automatically established (authentication codes are verified between the two devices by wireless communication),

Art Unit: 2609

predetermined operations such as locking or unlocking of a door is automatically realized. (See page 1, paragraphs 3 and 5).

From the teachings of Hara, it would have been obvious for one of ordinary skill in the art at the time the invention was made to modify the system of Ciotta to include a predetermined driver such as a door lock or unlock driver on a vehicle or a house to utilize the automatic verification between a portable device and a communication controller to avoid bothersome operations by a user, thereby increasing the convenience of a user.

Response to Argument

8. Regarding U.S. Patent No. 6,856,804 to Ciotta, the applicant indicated on page 8, last paragraph "no control of power for battery saving purposes is discussed. Further, on page 9, last paragraph, applicant stated that Ciotta fails to disclose "the portable device includes a receiving circuit which receives a signal from the communication controller, the portable device inactivating the receiving circuit when the portable device is in the disablement mode, and the recognition information includes one of a communication mode signal, which indicates the communication mode, and a disablement mode signal, which indicates the disablement mode" as recited in amended claims 1 and 11. Examiner respectfully disagrees. Clearly, Ciotta teaches that the mobile device 10 can be power off (disablement mode) and it is inherent that when the device is power off, the receiving circuit will not receive signal. In other words, the receiving circuit is inactivating.

Conclusion

Art Unit: 2609

9. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

- 10. A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.
- 11. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Yong Hang Jiang whose telephone number is 571-270-3024. The examiner can normally be reached on M-F 7:30 am to 5:30 pm alternate fridays off.
- 12. If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Lynda Jasmin can be reached on 571-270-3033. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
